Welcome to ioVote Documentation

What is ioVote?

ioVote is a web-based voting system designed to facilitate secure and transparent voting processes. Whether it's for elections, polls, or surveys, ioVote allows users to cast their votes easily while providing real-time analytics of results.

This documentation serves as a comprehensive guide to help you understand, install, and use ioVote efficiently.

☑ KEY FEATURES

- ✓ Secure and anonymous voting

- ✓ Real-time vote count updates

- ✓ User authentication and session tracking

- ✓ Simple and intuitive user interface

- ✓ Automated Email Invitations to all registered users

☑ GETTING STARTED

To start using ioVote, check out the **Installation Guide** for step-by-step instructions on setting it up. For an overview of how ioVote works, visit the **Project Overview** section.

📁 SOURCE CODE & CONTRIBUTIONS

ioVote is open-source! You can find the full codebase and contribute to the project on GitHub:
